

Software Tester Assessment

Test Case Design

1. Registration

ID	Scenario	Steps	Expected Result	Type
REG-01	Valid registration	Enter valid Name, Email, and Password → Submit	Account gets created successfully	Positive
REG-02	Email left blank	Leave Email blank, fill the rest → Submit	Blocked, with a message saying Email is required	Negative
REG-03	Badly formatted email	Enter something like "abc@" → Submit	Blocked, with a message about invalid email format	Negative
REG-04	Email already registered	Try registering with an email that's already in use → Submit	Blocked, with a message that the email is already registered	Negative
REG-05	Special characters in Name	Enter symbols or script-like text in the Name field → Submit	Handled safely — no crash, no broken output	Negative
REG-06	Very long Name/Password	Enter 300+ characters in Name or Password → Submit	Either a reasonable limit is enforced, or it's handled without breaking anything	Edge

2. Login

ID	Scenario	Steps	Expected Result	Type
LOGIN-01	Correct credentials	Enter valid email and password → Submit	Logs in and shows the user's own task list	Positive
LOGIN-02	Correct email, wrong password	Enter valid email with wrong password → Submit	Fails with a generic error, doesn't reveal which field was wrong	Negative
LOGIN-03	Unregistered email	Try logging in with an email that was never registered	Same generic error message; no account should get auto-created	Negative
LOGIN-04	Both fields blank	Leave Email and Password blank → Submit	Blocked with a validation message	Negative
LOGIN-05	Repeated failed attempts	Enter the wrong password 5+ times in a row	Some kind of protection is expected here (lockout/delay) — the system shouldn't allow unlimited guessing	Edge
LOGIN-06	Email case sensitivity	Register with e.g. "User@mail.com", then log in using "user@mail.com"	Login should still work — matching an email shouldn't depend on letter case	Edge

3. Create Task

ID	Scenario	Steps	Expected Result	Type
TASK-C-01	Valid task title	Enter a normal title → Save	Task gets saved and shows up in the list	Positive
TASK-C-02	Empty title	Leave the title blank → Save	Not saved; message says the title is required	Negative
TASK-C-03	Task persists after refresh	Create a task → Refresh the page	Task is still there, confirming it was actually saved and not just shown temporarily	Positive
TASK-C-04	Very long title	Enter 2,000+ characters as the title → Save	Either a limit is enforced, or it's handled gracefully without breaking the layout	Edge
TASK-C-05	Special characters in title	Enter symbols in the title → Save	Stored and displayed safely, no crash	Negative

4. View Task List

ID	Scenario	Steps	Expected Result	Type
TASK-V-01	New task appears in list	Create a task → View the list	Task appears with the correct details	Positive
TASK-V-02	User can't see another user's tasks	Log in as User A → View the task list	Only User A's tasks should show up, never User B's	Negative
TASK-V-03	Zero tasks (new account)	Log in with a brand-new account → View the list	An empty-state message should show, not a blank or broken screen	Edge
TASK-V-04	Multiple tasks display correctly	Create several tasks → View the list	List stays readable and correct even with more data in it	Positive

5. Edit Task

ID	Scenario	Steps	Expected Result	Type
TASK-E-01	Valid edit	Change the title to a new valid value → Save	Update is saved and shown correctly	Positive
TASK-E-02	Clear the title, try to save	Clear the title field → Save	Blocked — same rule as creating a task	Negative
TASK-E-03	User can't edit another user's task	Log in as User A → try editing a task belonging to User B	Action should be blocked	Negative
TASK-E-04	Cancel discards changes	Change the title → click Cancel	Task should stay exactly as it originally was	Positive
TASK-E-05	Very long updated title	Enter 2,000+ characters as the new title → Save	Handled gracefully, same as during creation	Edge

6. Delete Task

ID	Scenario	Steps	Expected Result	Type
TASK-D-01	Delete a task	Select a task → Delete → Refresh	Task is permanently removed and doesn't come back	Positive
TASK-D-02	Confirmation before deleting	Click Delete	A confirmation prompt should appear first	Positive
TASK-D-03	User can't delete another user's task	Log in as User A → try deleting a task belonging to User B	Action should be blocked	Negative
TASK-D-04	Cancel a deletion	Click Delete → then Cancel	Task should remain unchanged	Negative
TASK-D-05	Delete an already-deleted task	Try to delete a task that's already gone	Should be handled gracefully (e.g. "not found"), no crash	Edge

7. Input Validation & Error Handling

ID	Scenario	Steps	Expected Result	Type
VAL-01	Invalid email anywhere in the app	Enter a badly formatted email in any relevant field	A clear, specific message should appear — not a crash or silent acceptance	Negative
VAL-02	Backend error occurs	Trigger a failed save or load (e.g. a network drop mid-action)	A clean, user-friendly message should show — no raw technical or database error	Negative
VAL-03	Validation consistency	Compare the validation rules across Registration, Create Task, and Edit Task	The same rules should apply consistently wherever they're relevant	Negative

Potential Bugs / Risk Areas

ID	Potential Bug / Risk	Severity	Reason / Impact
BUG-01	A user might be able to view another user's tasks	Critical	This would expose someone else's private data. It's a serious privacy issue that would badly damage user trust.

ID	Potential Bug / Risk	Severity	Reason / Impact
BUG-02	Duplicate emails might not be blocked during registration	Major	Two accounts sharing one email could cause login confusion and make password recovery harder later on.
BUG-03	No confirmation step before deleting a task	Major	An accidental click could permanently wipe out a task with no way to undo it.
BUG-04	Raw technical or database errors shown to the user	Minor	Looks unprofessional and confuses users. This could become more serious if the error message accidentally reveals internal system details.
BUG-05	No message shown when a new user has zero tasks	Minor	A blank screen could make a brand-new user think the app is broken.
BUG-06	Editing a task might not validate the same way as creating one (e.g. an empty title gets saved)	Major	Inconsistent validation would let broken or meaningless task data into the database.
BUG-07	No session timeout, especially on shared devices	Critical	On a public or shared computer, the next person could access someone else's account without needing a password.
BUG-08	Task list might not auto-refresh after adding a task	Minor	There's an easy workaround (manual refresh) and no data is lost, but the user might think the task didn't save and try adding it again.
BUG-09	No maximum length enforced on the task title	Minor	Most likely just a display or layout issue with low real-world impact — though it's worth a closer look if a very long title ever blocks actual buttons or actions, not just the visuals.
